OVERVIEW OF TOOL

Included in the **ED 2.0** Full System

Real Time Filtering

EDsuite's 2.0 slider technology allows prospects to narrow their search without re-loading the page. Simply move the bars and the results refresh on the same page, instantly!

Google® Mapping

By harnessing the increasingly popular Google Maps®, EDsuite allows you to seamlessly manage your property data. Manage the precise location of your properties and provide your site visitors a familiar mapping system that they'll enjoy using.

Search and display properties that meet your criteria, with speed and precision, without leaving the page.

Exciting New Features:

- » Google® API Mapping integration.
- » Real-time search results (no page loads!).
- » User friendly buttons and display.
- » Designed to match your website.
- » Custom Report Builder integration.

We have implemented advanced filtering technology which allows the visitor to view one page and use sliding scales to set search parameters like square footage, ceiling height, etc. As the user adjusts the search criteria the results continually adjust within the same page, allowing the user to see the results simultaneously as they modify their search. This speeds the search process by eliminating the need to load the page each time they make an adjustment to the search criteria.

In the past, a large budget would be required for 3rd party GIS systems to be integrated within your website. Today, with the integration of powerful open-sourced technology, and the combination of EDsuite 2.0 advanced CMS, you can enjoy an impressive, professionally designed mapping system at a fraction of the cost.

"When we embarked on our website development project we had a defined vision. In addition to their outstanding tools, EDsuite understood that vision. What resulted was a website that exceeded our expectations. We recommend EDsuite to anyone that needs a cutting edge web development firm that understands economic development."

Jonathan Packer, Marketing Director
